Spatial Enablement the Response to Climate Change the Millennium Development Goals

Prof. Stig Enemark

FIG President

Aalborg University, Denmark

18th United Nations Regional Cartographis Conference For Asia and Pacific Bangkok, 26-30 October 2009

Outline of presentation

The global agendaFacing the Millennium Development Goals

Land governance

Managing land rights, restrictions, and responsibilities

Spatially enabled government

The significant role of the cadastre

Climate change

Land administration in support of climate change adaptation

Natural disaster prevention and management

Land administration in support of natural disaster risk management

The Millennium Development Goals

Goal 1: Eradicate extreme poverty and hunger

Goal 2: Achieve universal primary education

Goal 3: Promote gender equality and empower women

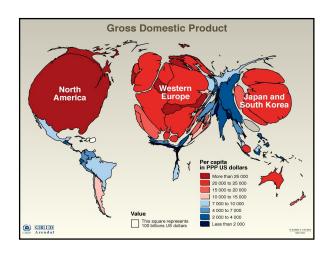

Goal 4: Reduce child mortality Goal 5: Improve maternal health

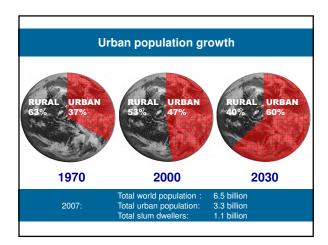

Goal 6: Combat HIV/AIDS, malaria and other diseases

Goal 7: Ensure environmental sustainability

Goal 8: Develop a Global Partnership for Development

The framework includes 18 targets and 48 indicators enabling the ongoing monitoring of annual progress

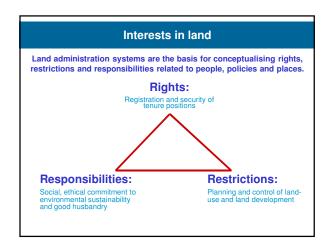

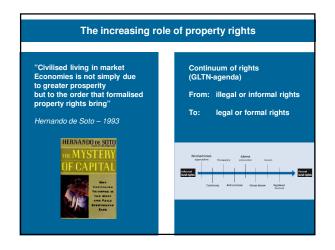

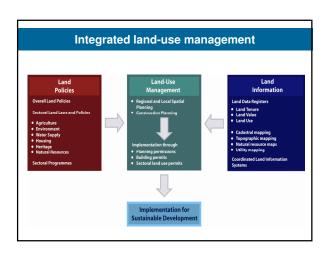

Land governance Land governance is about the policies, processes and institutions by which land, property and natural resources are managed. This includes decisions on access to land; land rights; land use; and land development. Land governance is about determining and implementing sustainable land policies.

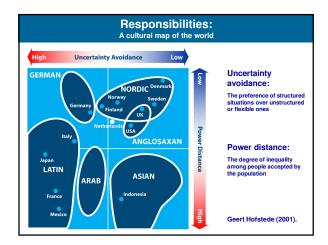

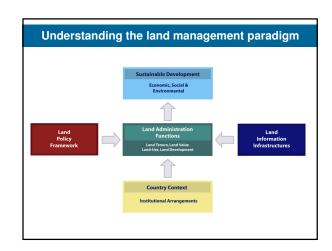

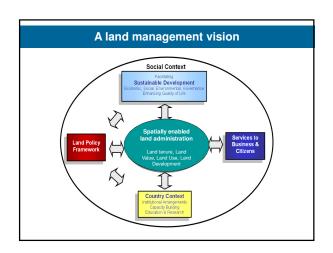

Property Restrictions - two conflicting approaches • The free market approach (current debate in the US) - Land owners should be obligated to no one and should have complete domain over their land. - The role of government to take over, restrict, or even regulate its use should be non-existent or highly limited. - Planning restrictions should only be imposed after compensation for lost land development opportunities • The central planning approach (European perspective) - The role of democratic government include planning and regulating land systematically for public good purposes. - A move from every kind of land use being allowed unless it was forbidden to every change of land use is forbidden unless it is permitted and consistent with adopted planning regulations and restrictions.

Place matters

Everything happens somewhere

If we can understand more about the nature of "place" where things happen, and the impact on the people and assets on that location, we can plan better, manage risk better, and use our resources better.

"Heading toward spatial enabled society"

Institutional Challenges

- There are a range of stakeholder interests
 This includes Ministries/Departments such as:
 Justice; Taxation; Planning; Environment; Transport;
 Agriculture; Housing; Interior (regional and local authorities); Utilities; and civil society interests such as businesses and citizens.
- Creating awareness of the benefits of developing a shared platform for Integrated Land Information Management takes time and patience.
- · Mapping/Cadastral Agencies have a key role to play

Spatially Enabled Government

A spatially enabled government organises its business and processes around "place" based technologies, as distinct from using maps, visuals, and webenablement.

The technical core of Spatially Enabling Government Is the spatially enabled cadastre.

Significance of the Cadastre Cadastral engines... 1. Multipurpose Cadastre (German style) Cadastre (Trevor/Digith anyto) 2. Title or deeds tenure style Cadastres (Trevor/Digith anyto) 3. Taxation driven cadastre (Provident/Lisin) 1. Taxation driven (Provident/Lisin) 2. Title or deeds tenure style Cadastres (Trevor/Digith anyto) 1. Taxation driven (Provident/Lisin) 3. Taxation driven (Country Context)

Land Governance — a hierarchy of land issues Land policy Land management paradigm Land adm. system SDI Cadastre Land parcel "Land in Society"

Sustainable and locally responsive: It balances the economic, social, and environmental needs of present and future generations, and locates its service provision at the closest level to citizens. Legitimate and equitable: It has been endorsed by society through democratic processes and deals tairly and impartially with individuals and groups providing non-discriminatory access to services. Efficient, effective and competent: It formulates policy and implements it efficiently by delivering services of high quality Transparent, accountable and predictable: It is open and demorstrates stewardship by responding to questioning and providing decisions in accordance with rules and regulations. Participatory and providing security and stability: It enables citizens to participate in government and provides security of livelihoods, freedom from crime and intolerance. Dedicated to integrity: Officials perform their duties without bribe and give independent advice and judgements, and respects confidentiality. Ther is a clear separation between private interests of officials and politicians and the affairs of government. Adapted from FAO, 2007

Land administration in support of natural disaster risk management

Facing the new challenges

Focusing on land Governance and achieving the MDGs, also includes facing the big challenges of the new millennium:

- · Climate change
- Food shortage
- Energy scarcity
- Urban growth
- Environmental degradation
- · Natural disasters
- · Global financial crisis

All these challenges relate to governance and management of land Land professionals play a key role

Climate change

"Climate change is the defining challenge of our time"

Combining the impacts of climate change with the current global financial crisis we risk that all the efforts to meet the MDGs will be rolled back.

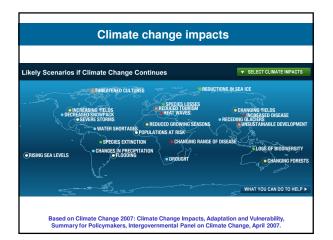

This problem continue to be discroportionally at risk.

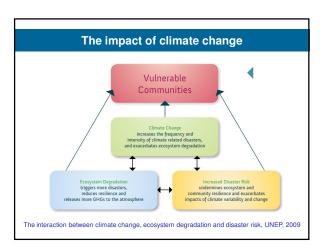

Ban Ki-moon, UN secreatry general

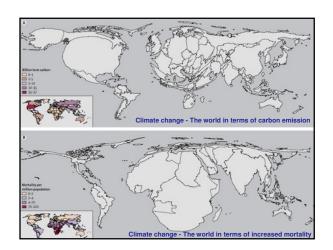

"Climate change also provides a range of opportunities"

Prevention of climate change can be greatly enhanced through better land-use planning and building codes so that cities keep their ecological footprints to a minimum and make sure that their residents, especially the po

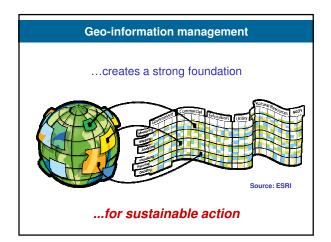

Anna Tibaijuka, Executive Director, UN-Habitat

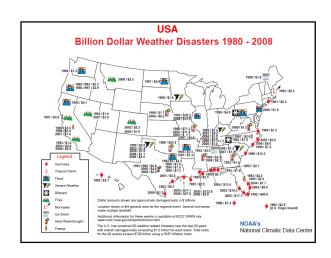

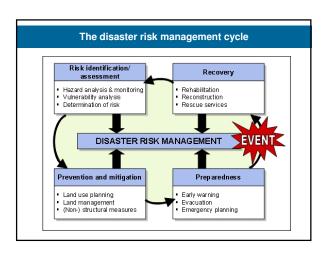

No matter the inequity between the developed and developing world in terms of emissions and climate consequences, there is a need to develop relevant means of adaptation to climate change both in the rich and the poorer countries. Sustainable Land Administration Systems should serve as a basis for climate change mitigation and adaptation as well as prevention and management of natural disasters. Incorporating climate change into current land policies Adopting standards for energy use, emissions, carbon stock potential,..... Identifying prone areas (sea level rise, drought, flooding, fires....) Controlling access to land and the use of land in relation to climate change and disaster risks. Controlling building standards and emissions in relation to climate change.

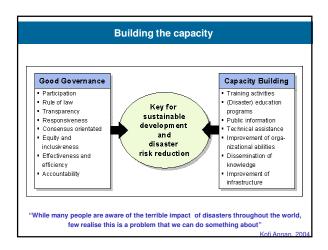

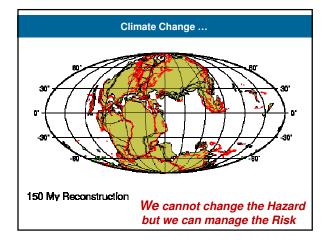

Disaster risk prevention and management

- Humanitarian actors are often confronted with land issues
 when undertaking emergency shelter and protection activity.
- The information on the people to land relationship is crucial in the immediate post disaster situation.
- Disaster risks must be identified as area zones in the land-use plans and the land information system with the relevant risk assessment and information attached.
- Measures for disaster risk prevention and management should be integrated in the land administration systems

Post Disaster Land Guidelines developed by FAO/UN-Habitat
