LIN

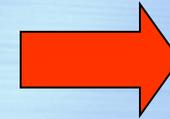

- *a complete software solution for managing information related to formalized property rights and for automating the business processes involved in the transfer of those rights*
- *a means for the collection, storage, and retrieval of a variety of other land information associated with the same units of land affected by those formalized rights*

Centralized Database

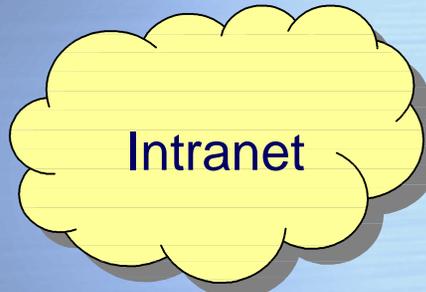

Internet

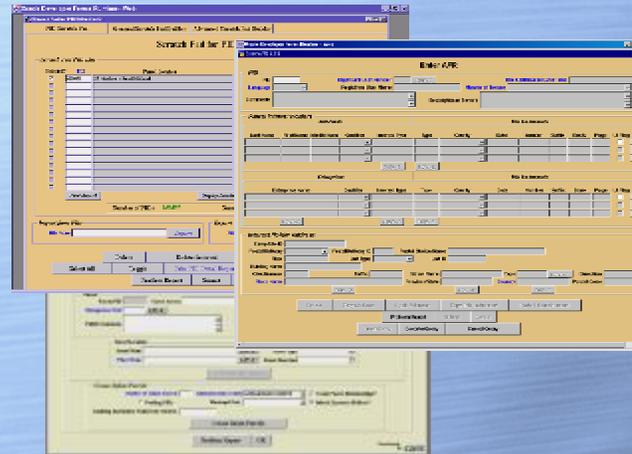

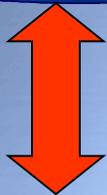

External Access

- Lawyers
- Surveyors
- Real Estate Brokers

Intranet

Semi- Automated Business Processes

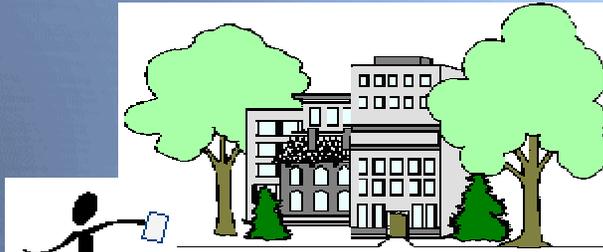

Internal Access

- Administration Access Control
- Front Office/Back Office
- Operational Staff
- Quality Control

Business Processes

Full Document Process

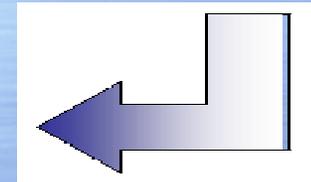

Lawyer goes to the Registry office with his document

Registry front counter staff index the document, accept payment and generate the receipt.

Document moves to the back counter, where the data is completed/verified.

Once the necessary edits are completed, the document is registered (and requested for scanning).

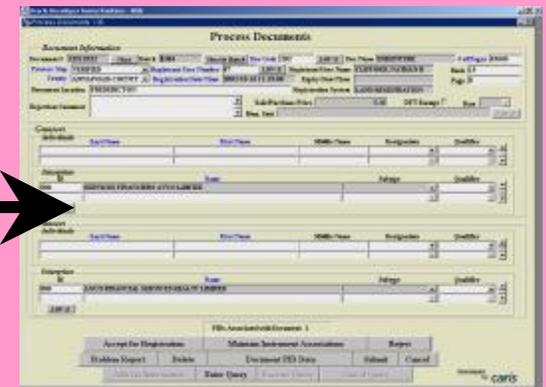

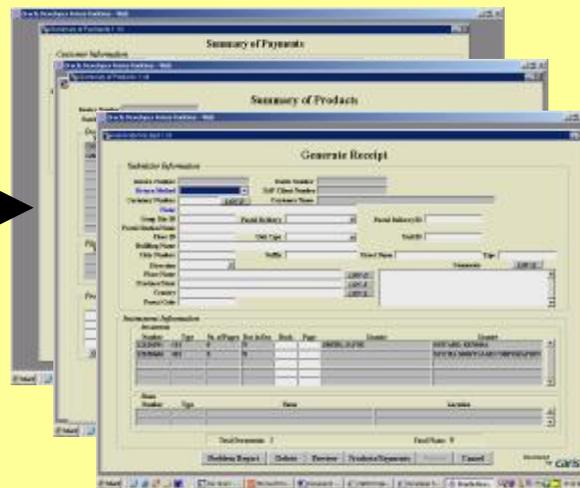

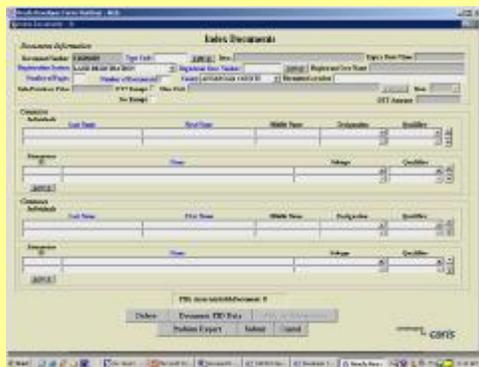

Document moves to the scanning station, where it is scanned and then moved through the Quality Control process.

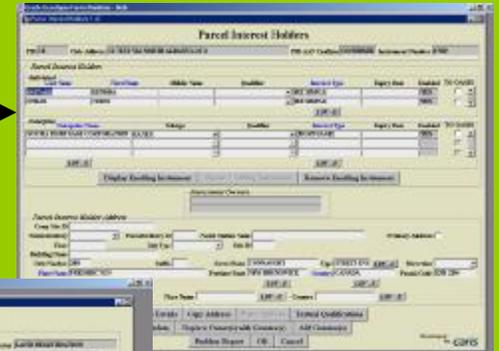

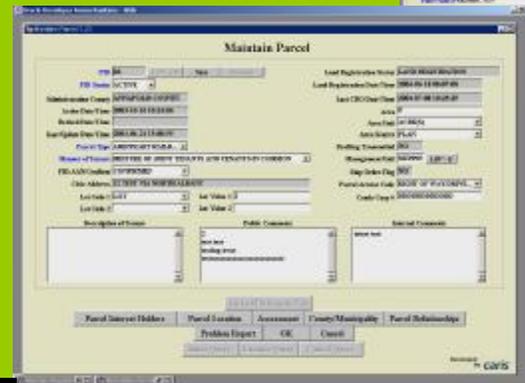

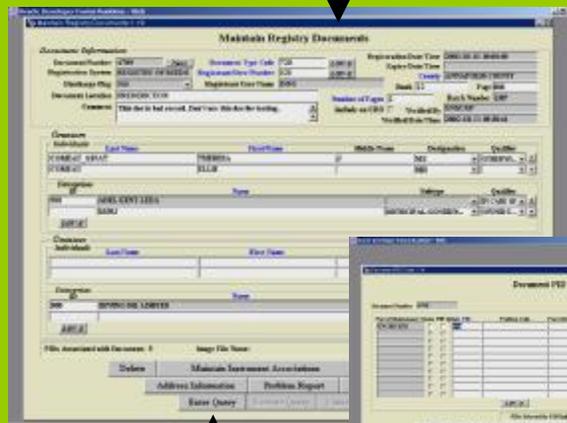

Document moves to the Property Mapper, where the parcel register/attribute data are maintained as required.

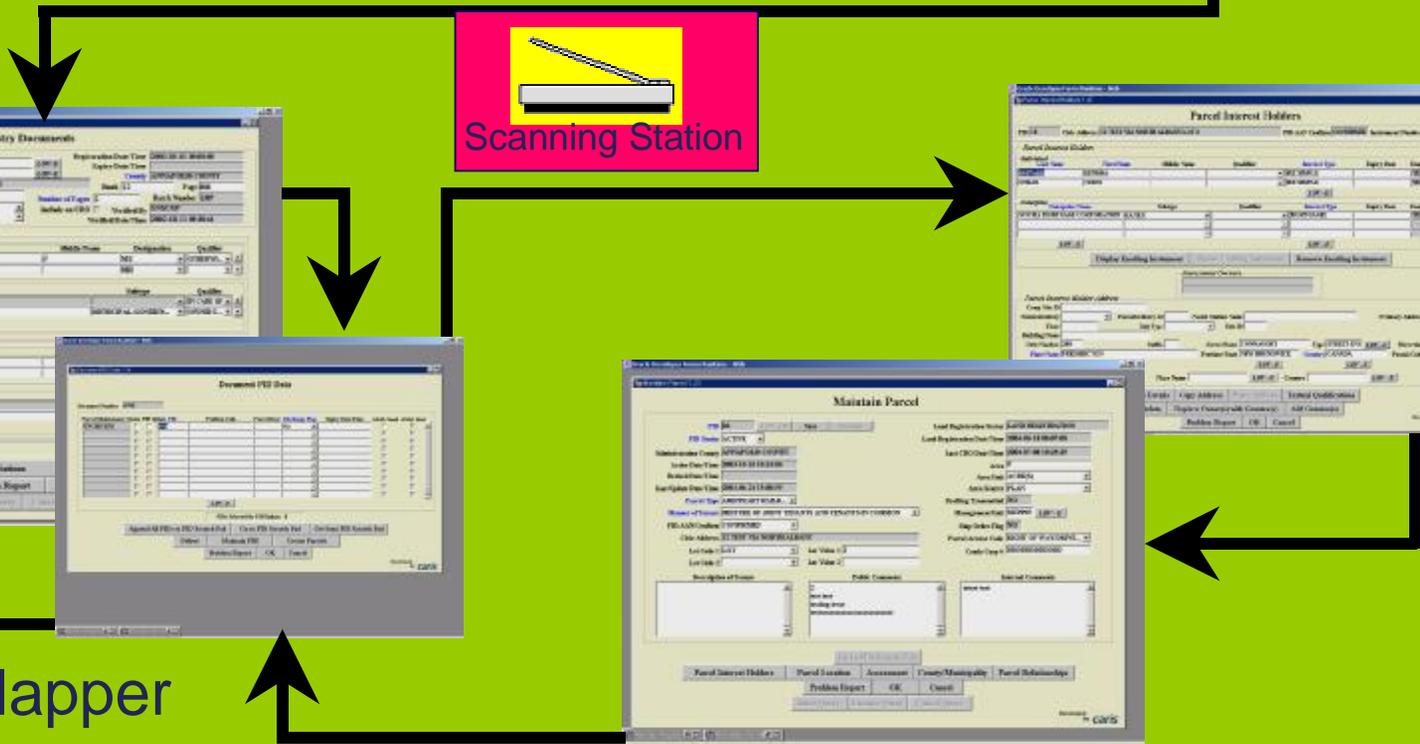

Front Counter

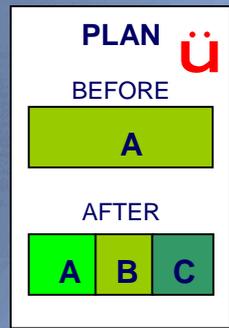

Back Counter

Property Mapper

Updating Cadastre

Registered Plan

Triggers a need to update the property graphics

Graphical Change Order

Affected PID(s) have their Map Revision flag set to 'Yes'

Mapper receives GCO and begins update process

Check Out Management Unit for Update

Locks selected MU to prevent another user from making changes

The user retrieves the file from the repository.

Cadastre Maintenance Tool

Graphics are updated to reflect necessary changes

Check In Management Unit

User checks the MU back in, and places the file back in the repository.

External Portal

Changes to map data are now viewable to the external users

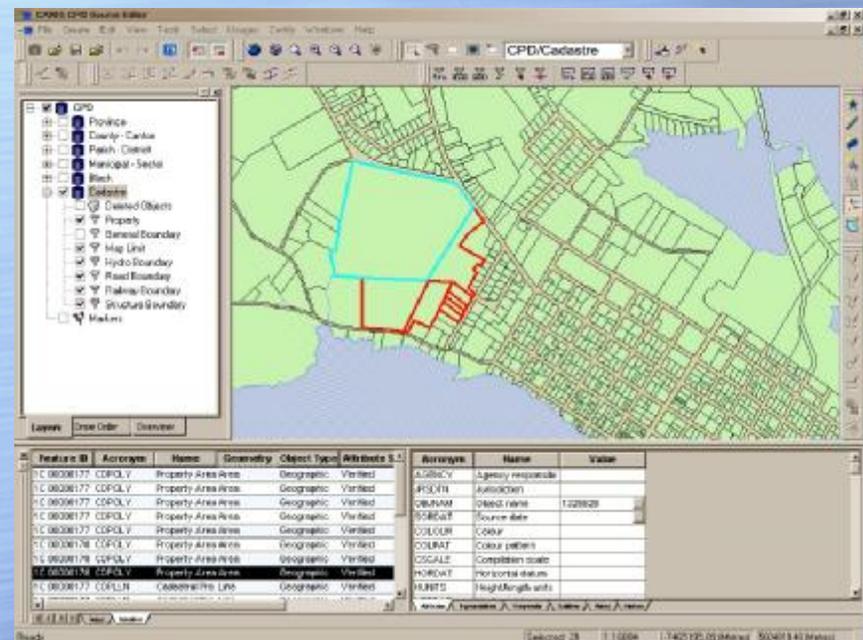

Picks up checked in files and integrates them back into the map fabric.

Parcels have their Map Revision flag set back to 'No'

CARIS- Cadastre Production Database (CPD)

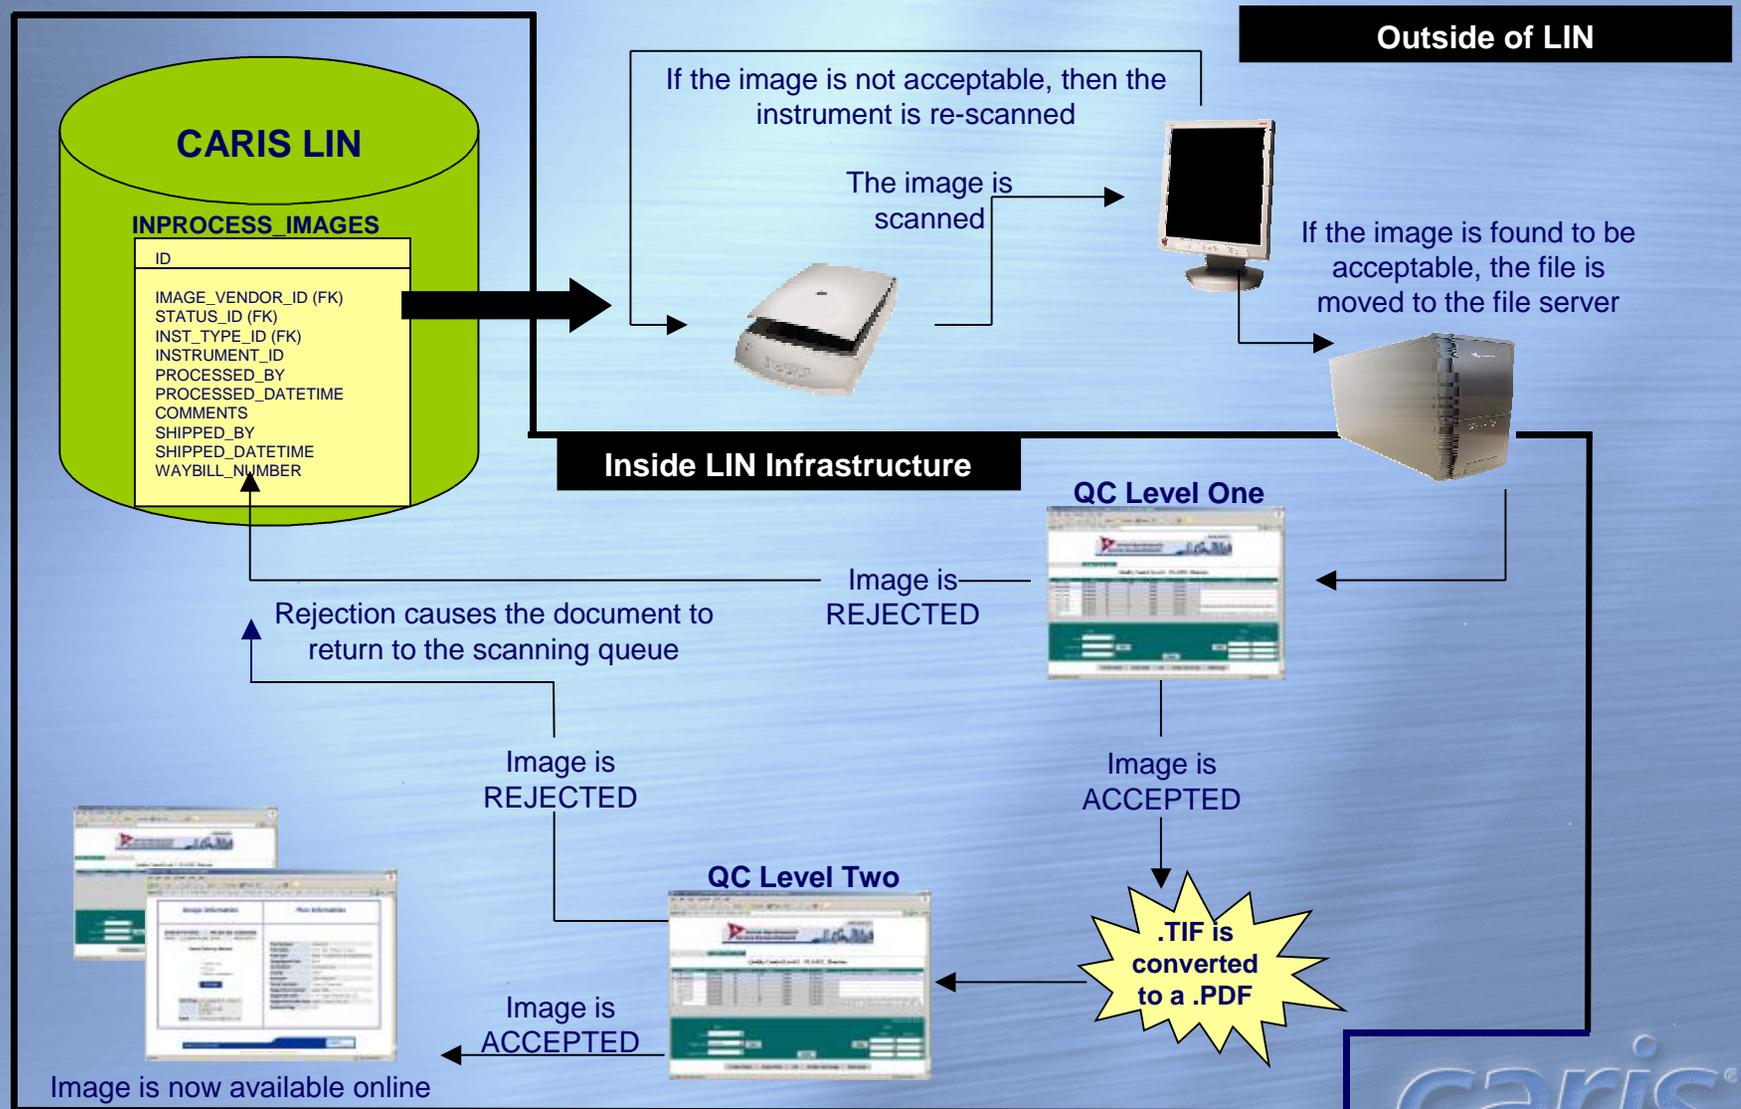

Customized business application: to construct land objects based on a series of coordinated points that have been surveyed and adjusted.

- Database Driven
- Quality Control Mechanisms
- Retain Parcel History
- Distributed Multi-user Access
- Centralized Database

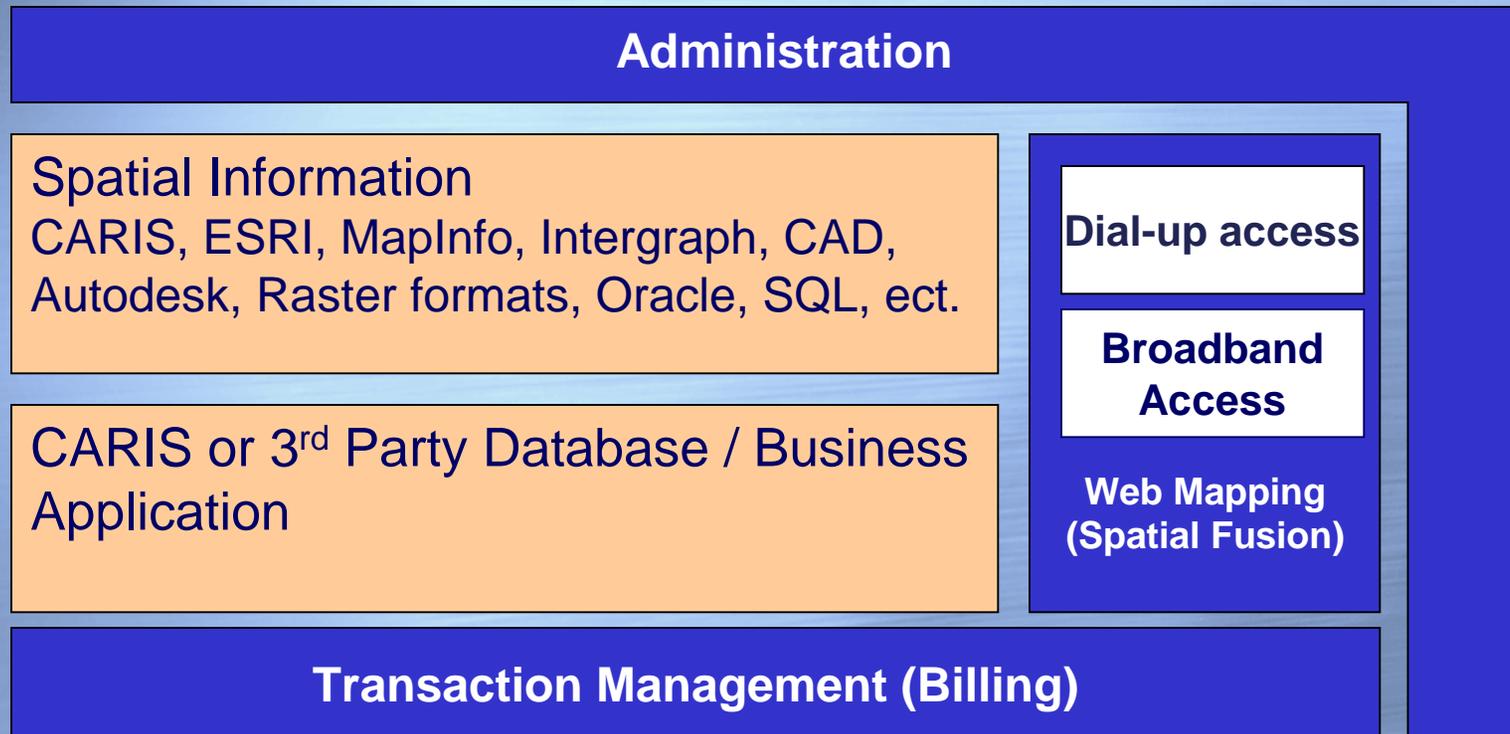

Imaging Process

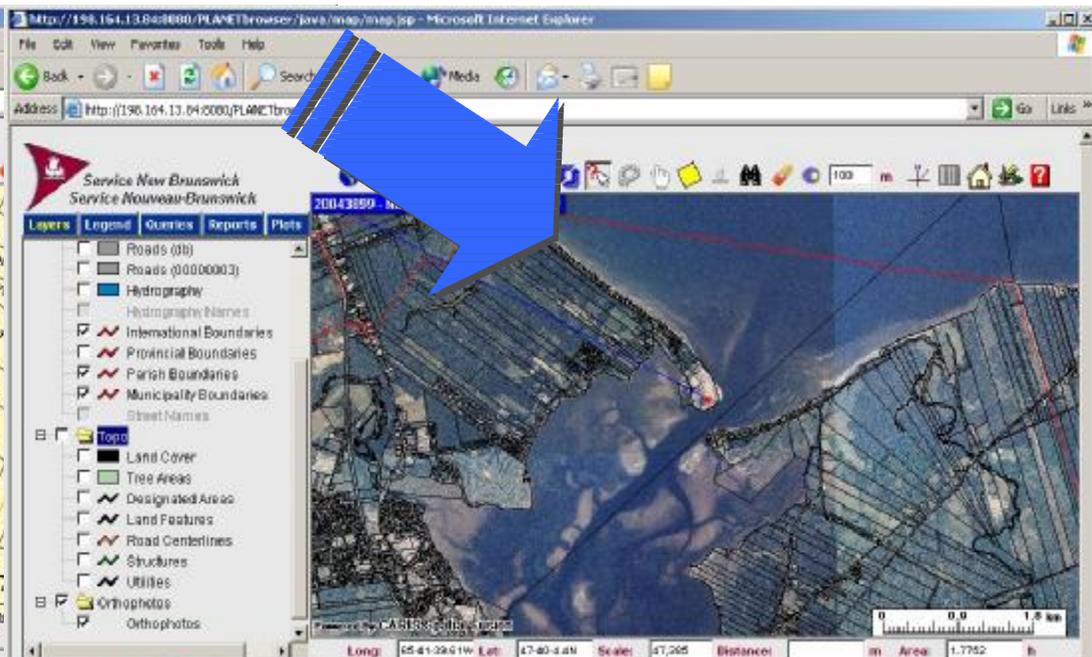

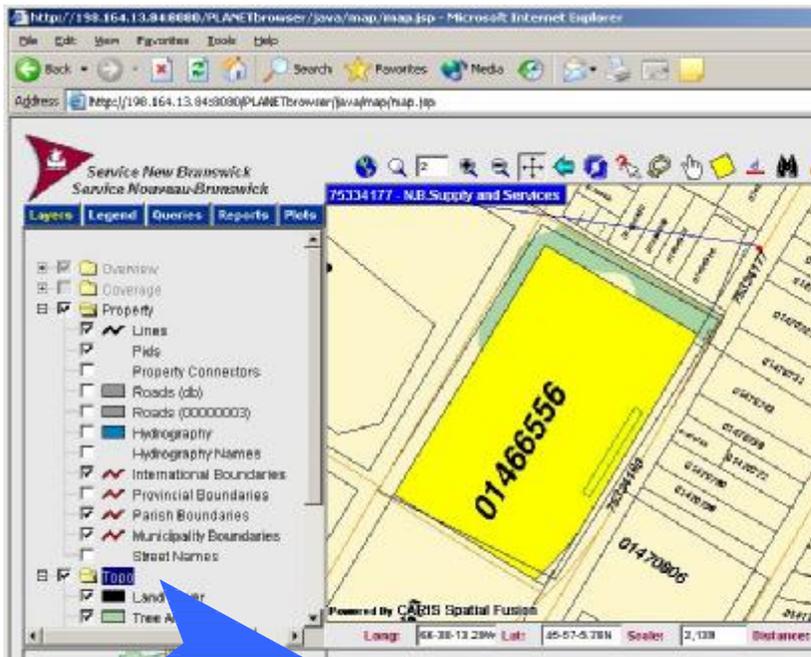

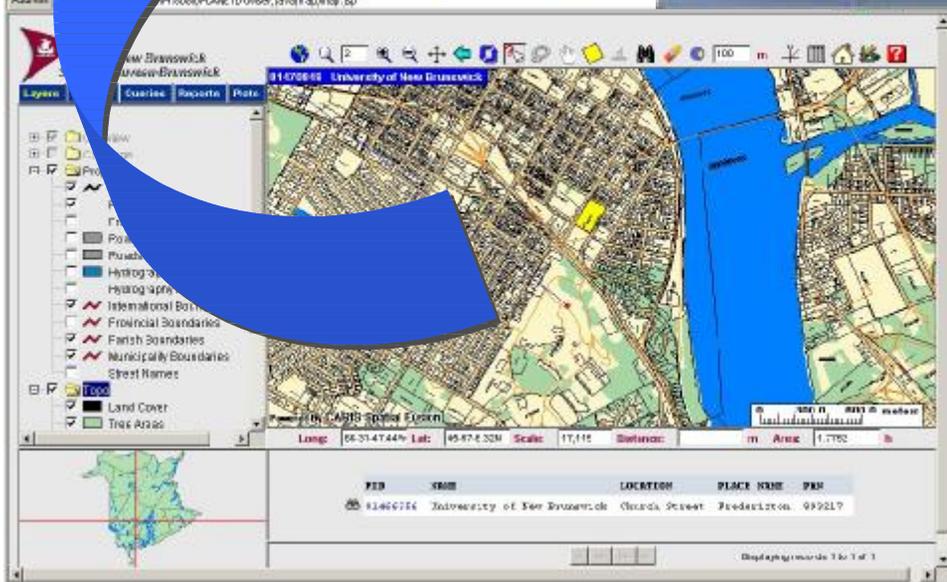

External Access – Internet Browser

- Internet Browser based on CARIS ICIS technology has been designed and built specifically to address the deployment of land information in an internet environment.
