

UAV Use in Italy by Surveyors

Giuseppe Mangione and Domenico Romanelli (Italy)

Key words: Cadastre; Cartography; Land management; UAV; Agriculture; Measure

SUMMARY

In Italy, the definition of the territorial boundaries between the private property has always been a source of disagreement. The Act provides that the boundaries are determined by evidence and only in the final analysis you have to report to the cadastral maps, which is known in Italy are not conclusive often the surveyor is called upon to give its opinion on the subject of boundaries, making the survey the current state of a property and then compare it with the map of the first Italian land registry (early 1900) and then with all the modifications made to it by other professionals since 1900. In this report we will see how they have evolved the maps, survey methods and procedures for updating the maps from 1900 to the present.
