Diamond Sponsors

## Introduction

- The Uganda government secured funding from World Bank to support the development and implementation of the land information system. This was carried out in (03) three phases: - With the first phase having the baseline study, Preliminary Design of the Land Information System and Strategy for securing of land records which was completed in 2007. This was followed by the detailed design, Installation and pilot implementation in 2010. Phase III, rolled out and decentralized the National Cadastre and the LIS across (22) twenty-two locations (zones) . With the migration from the manual records (paper-based) to digitalization of the cadastral data and land records, it is important that the CIA triad is put into consideration.

# FIG WORKING WEEK 2023

28 May - 1 June 2023 Orlando Florida USA

*Protecting Our World, Conquering New Frontiers*

## LIS Phase 1 (2010-2013)

- Kampala
- Wakiso
- Mukono
- Jinja
- Masaka
- Mbarara

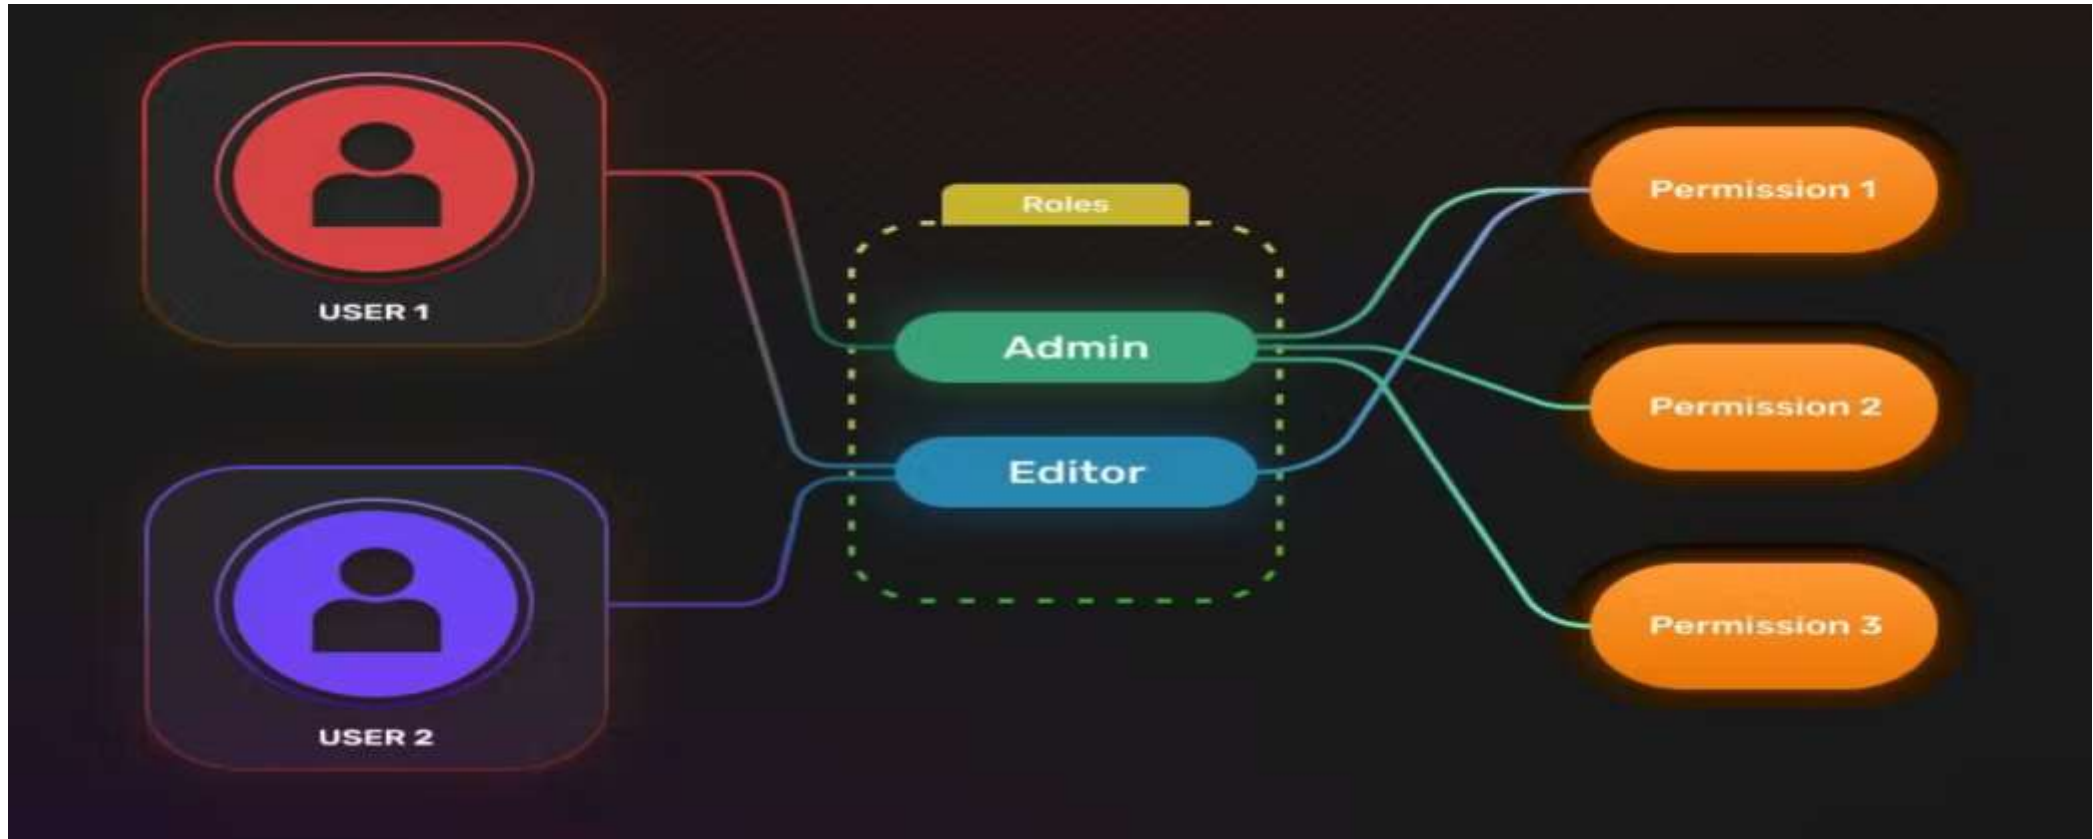

## LIS Phase 2 (2015-2020)

- Lira
- Kabarole
- Kibaale
- Arua
- Gulu
- Masindi
- Mbale
- Mpigi
- Rukungiri
- Kabale
- Mityana
- Luwero
- Soroti
- Tororo
- Moroto
- Wakiso 2

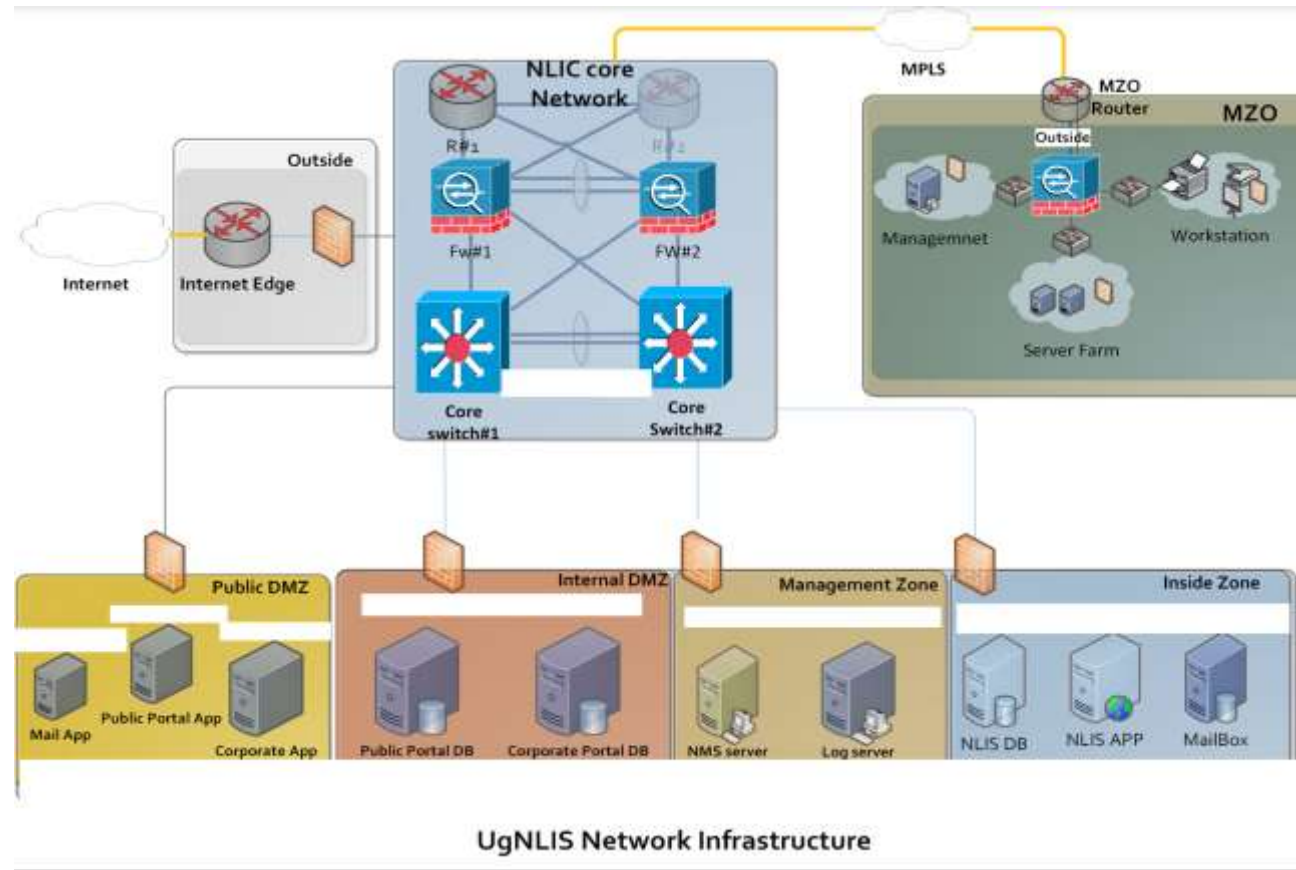

## PRIVACY AND SECURITY ISSUES

Implementing access control measures for Uganda's National Land Information Systems (NLIS) towards the cloud involves various security practices to ensure the protection of sensitive land-related data. Here are some key measures that can be implemented:

## Role-Based Access Control (RBAC):

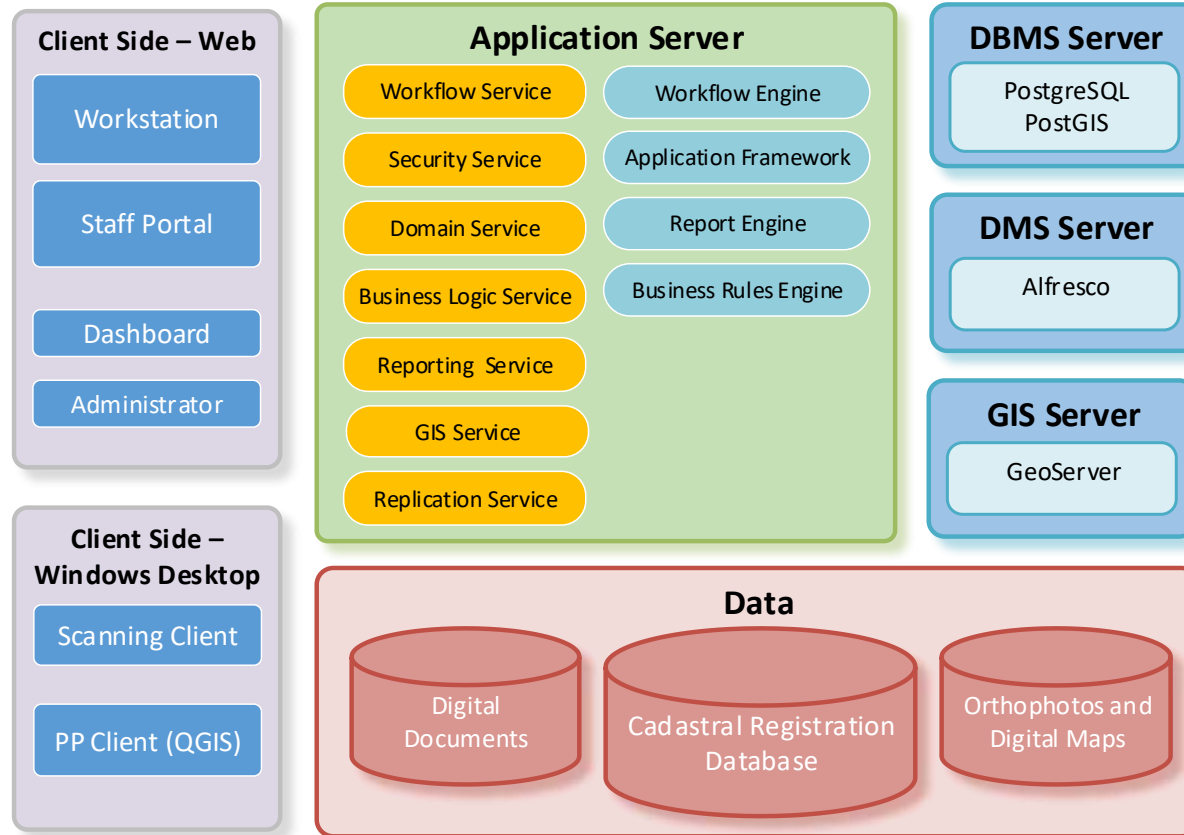

## Secure Network Architecture:

Uganda NLIS – Architecture and Functionalities

## Architecture – MZO Components

### Servers

- Application Srvr
- GIS Srvr
- DBMS Srvr
- DMS Srvr

### Data

- Cad-Reg DB
- Digital Docs
- Map Imagery

## Authentication Mechanisms:

## PRIVACY AND SECURITY ISSUES: CONCLUSION

The use of cloud computing has been widely adopted by many organizations since it provides many benefits like high computation power, scalability of applications, access to information from different locations and lower cost operation and maintenance by the user. However, security and privacy aspects have to be clearly defined and implemented to prevent data loss and breaches. The UgNLIS typically runs on a RBAC mechanism that is centralized and to migrate LIS operations to cloud there is need to adopt a tailored access control mechanism to take into the many benefits of the cloud. Nevertheless, cloud vendors have constantly innovated cloud services to tackle the privacy concerns relating to how data is accessed, managed and stored.
