

Public Service Delegation and Compulsory Continuing Professional Development

Dominique DESMET, France

Key words: education and long life training.

SUMMARY

Continuing professional development is an important issue when a profession has to deal with more and more responsibility.

After the initial formation which leads to an authorization to work, it is necessary that the surveyor upgrades his knowledge. It will benefit to the consumer himself.

One solution would be to have certifications which could be periodically redelivered and even censured by court. Another solution is to improve knowledge and information by a compulsory professional training.

The “ordre des géomètres experts” recommended to every member to have at least 40 hours of CPD. It can be an average on 3 years and can also have 50 % in basic training. The other 50 % can be other kind of activity like writing articles for a professional paper, presenting papers to seminars, ...

RESUME

La formation continue obligatoire dans les pays à délégation de service public, peut être une alternative au développement des contentieux liés à l'obligation de résultats.

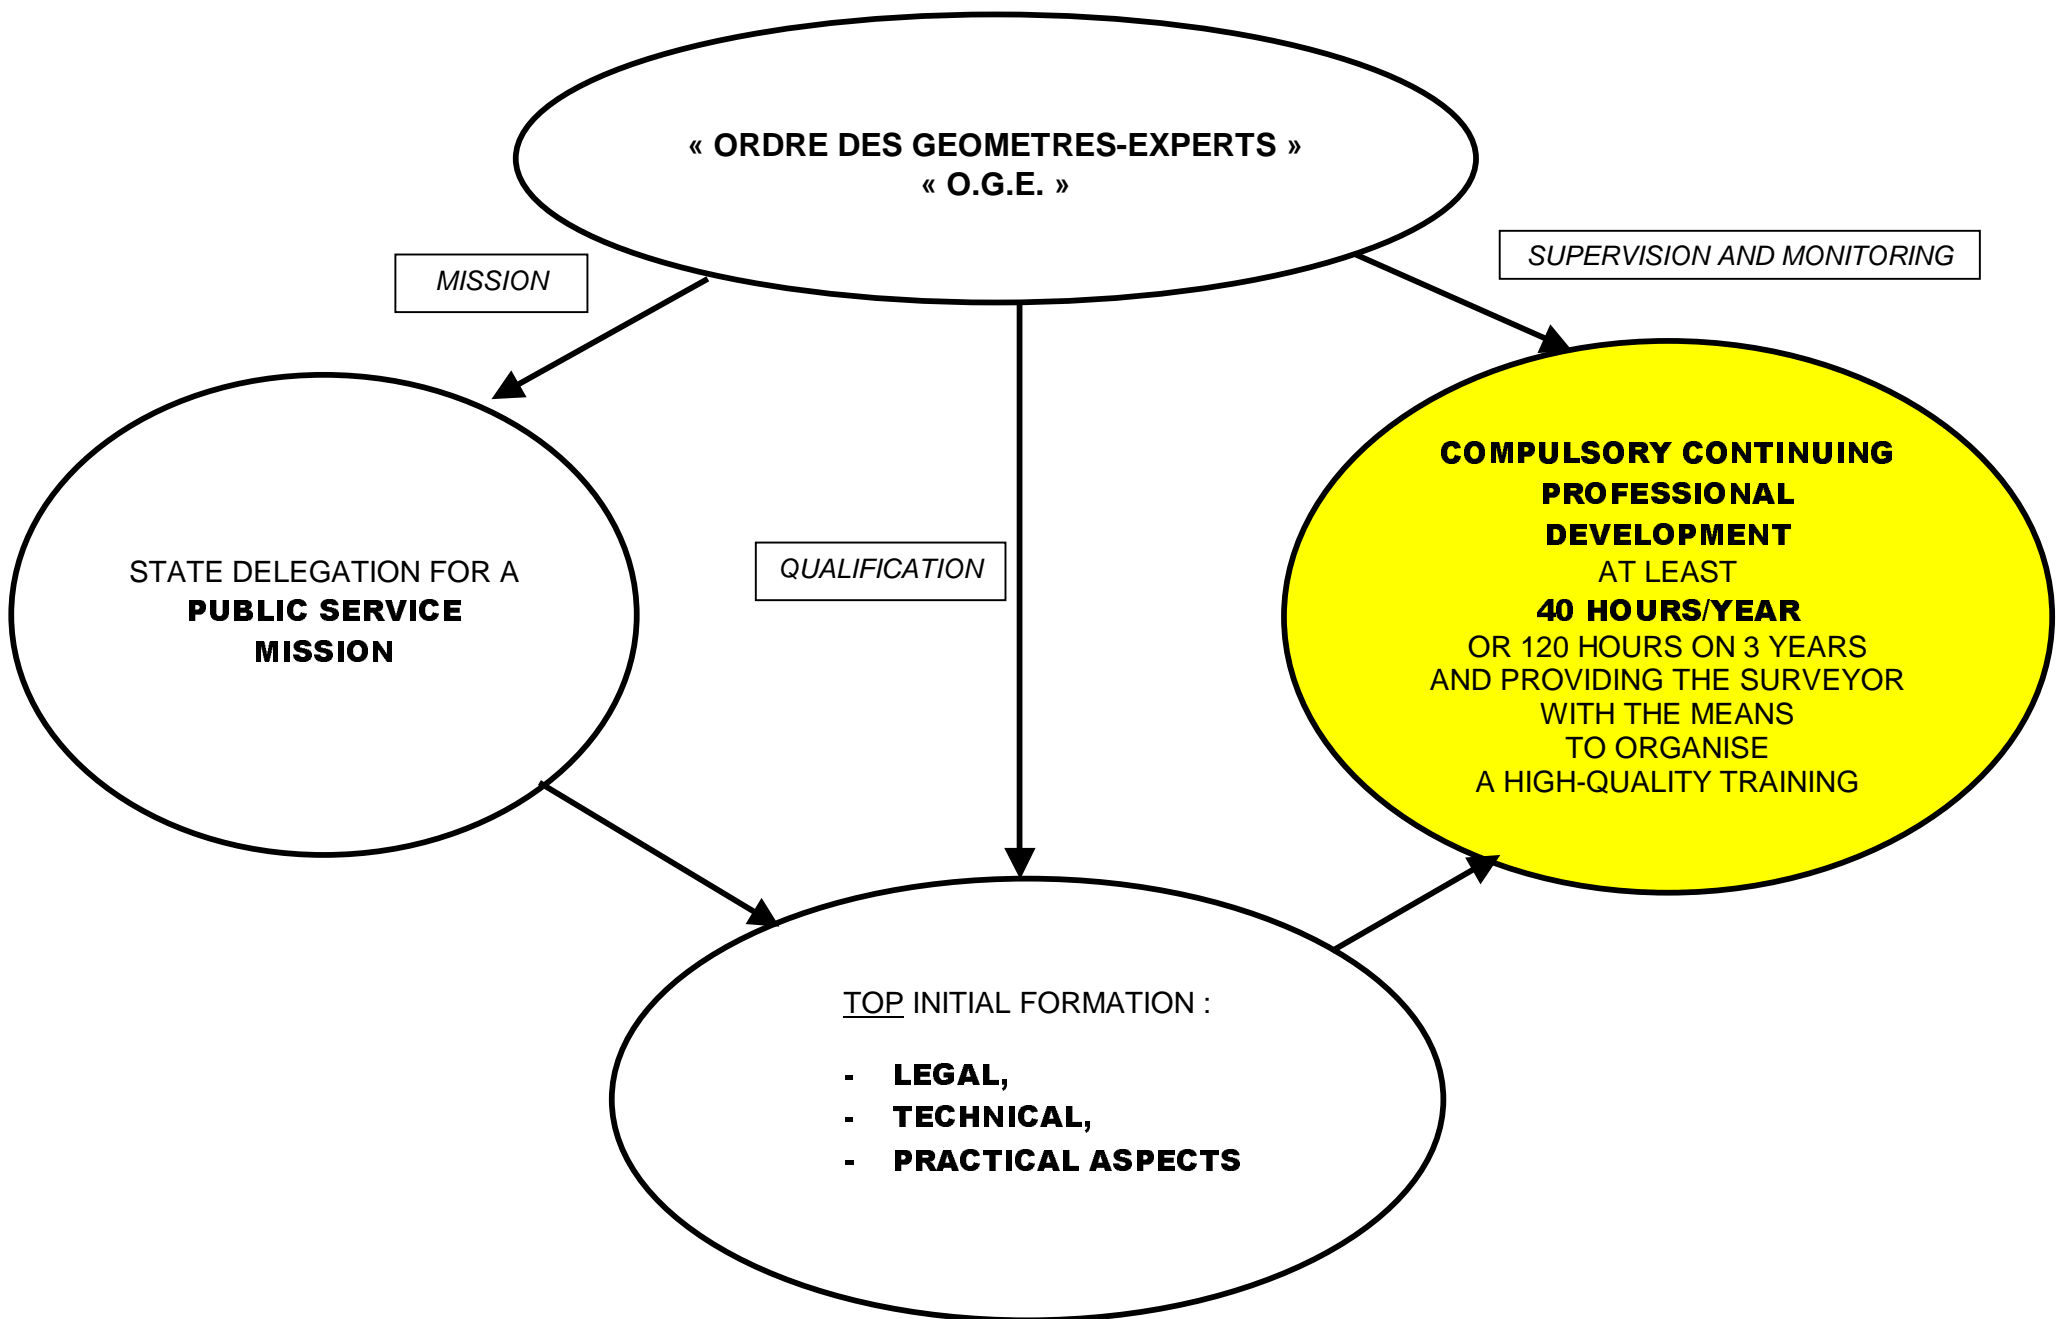

Après une formation initiale et l'autorisation d'exercer délivrée par le gouvernement, il importe que le professionnel fasse évoluer ses pratiques pour une meilleure satisfaction du client.

Une solution est de l'astreindre à des normes de résultats ainsi qu'à une certification renouvelée régulièrement et éventuellement censurée par les tribunaux. Une autre solution est d'améliorer sa formation et son information par une formation continue obligatoire.

L'expérience présentée par l'Ordre des géomètres-experts français est de recommander à ses membres une formation de 40 heures par an, éventuellement comptabilisée sur trois ans pour un total de 120 heures, répartie en actions directes pour 50 % du temps et en actions indirectes telles la rédaction d'articles, la participation à des colloques, etc ...
